

SCADA. Optimization. Automation. Production.

SCADA. Intelligence. Delivered.

25 YEARS OF INNOVATION

We have earned a reputation as a global leader in Systems Integration. Our focus on advanced technology and implementation strategies allows us to provide our clients with innovative solutions to complex industry challenges.

Headquartered in the heart of the Houston Energy Corridor, we are a team of 50 talented engineers offering full turnkey solutions from design and engineering to programming, testing and commissioning of industrial automation, SCADA processes and control.

SOAP Engineering was built 100% on referrals.

SCADA

SOAP combines traditional automation with modern day architecture to implement SCADA solutions that do not just provide passive monitoring, but give you actionable information.

Turn your historical data dump into an efficient operational feedback engine.

Optimization

Information is power, but raw data without meaningful statistics doesn't help a manager make a sound business decision. SOAP enables you to turn metrics and KPIs into powerful tools.

Leverage your data to drive informed decision-making.

Automation

Automation is not just for your equipment. It includes processes and standards as well. SOAP integrates powerful hardware and software technologies to empower your operations.

Stop just gathering data and start managing it.

Production

Once your facility, pipeline, oil rig, or asset is operational, the fun begins. SOAP analyzes and rationalizes data against optimal production curves to recommend improvements to existing procedures.

Increase ultimate recovery and maximize your production.

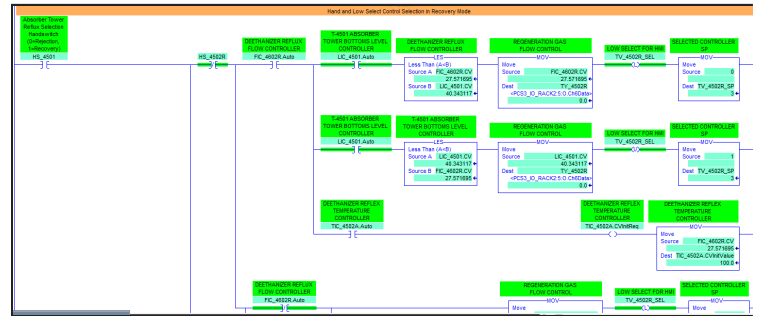

Service Portfolio

Providing visualization, business intelligence and production optimization under one umbrella.

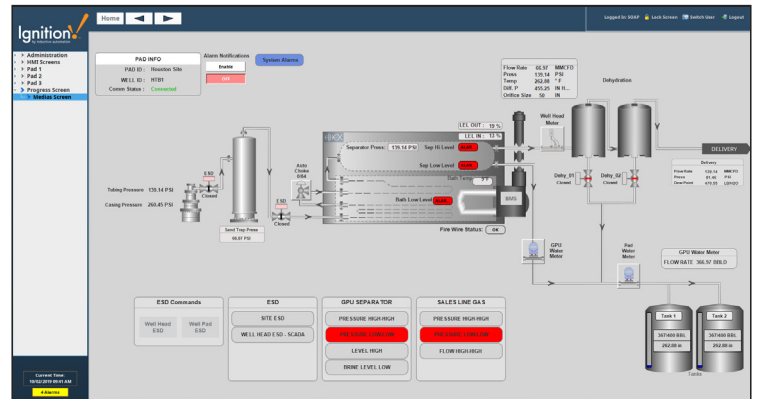

Engineering Services

- Project Management
- Front End Engineering Design (FEED)
- Procurement
- PLC/DCS/HMI Programming
- Panel Fabrication
- SOP and System Documentation
- Drafting
- Field Services – Installation, Calibration, and Commissioning
- Training
- Service and Support

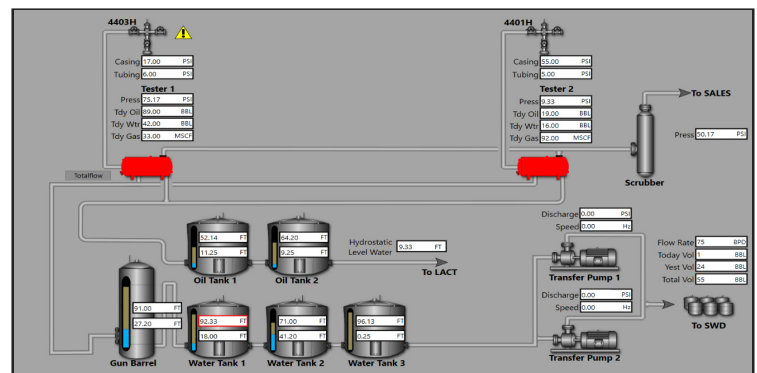

SCADA Implementation

- Turnkey Solutions
- On-Premises or SCADA-as-a-Service
- Greenfield Installations, Upgrades and Enhancements
- Infrastructure Design
- High Performance HMI Standardization (API 1165)
- Business Intelligence – KPIs, Smart Dashboards, and Reporting
- Historian and Database Configuration and Management
- Alarm Rationalization
- Pipeline Leak Detection

Digital Oil Field

- Surveillance Optimization Suite (SOS)
- Edge/IoT/Cloud Solutions
- Intelligent Dashboards and Analytics
- Tank Level Checks and Truck Scheduling
- Lifting Optimization
- Route Optimization
- Preventative Maintenance
- Camera and Sound Integration
- Flare Management
- Compressor Monitoring
- Geo-fencing

HOW CAN WE HELP?

Industrial automation and process control design and implementation is not a trivial business or a one-size-fits-all application.

Oil & Gas

In today's oil and gas market, adding efficiencies into every aspect of the business is critical to remain competitive. We focus on implementing systems and methodologies to improve efficiency in upstream, midstream, downstream and offshore operations.

Manufacturing

Time is money for manufacturers. The more output from operational production lines, the more goods and materials they have to offer to the market. We help manufacturers optimize the production lines by implementing SCADA systems designed for their business objectives.

Facilities

Cryogenic, Refining, Water and Chemical processing facilities require strict safety protocols to meet HSE regulations. Our certified Engineers follow strict regulatory standards to add additional business value beyond just safety.

SCADA. Optimization. Automation. Production.

SCADA. Intelligence. Delivered.
